

FREE ONLINE WEBINAR

Building energy-efficient houses that save money and help the environment

Whether you are rebuilding after the fires, planning a renovation or other building project, or simply want to reduce your energy bills, this webinar will present valuable and practical insights from leading experts in the field of energy-efficient building design.

A well designed or renovated energy efficient house will not only help you save money, but it will also provide a more comfortable living space and create a healthier living environment both for you and the planet. A win-win all around.

The webinar will provide information about designing an energy-efficient home as well as practical suggestions for retrofitting existing homes.

The 90-minute webinar will include short presentations followed by a Q&A.

Presenters

Alan Pears AM

Alan is one of Australia's leading energy efficiency experts and has worked in the sustainable energy and environment fields since the late 1970s. He has been an expert adviser to federal, state and local governments across Australia, as well as community groups and the private sector.

Paul Dolphin

Paul is based in Malua Bay and specialises in creating liveable, low-energy homes. He is a registered Building Designer, with an undergraduate degree in Town Planning, a masters in Landscape Architecture and a masters in Building Surveying. He is also qualified as a Sustainability Design Specialist. He understands the demands of our local environment and has been a passionate advocate for affordable sustainable design.

WHEN: 6.00 pm-7.30 pm Wed 26 August
